

a9

computer-readable recording medium such as a hard disc, floppy disc, CD-ROM, MO or DVD etc., and is executed by being read from the recording medium by the information processing device. This program can be distributed via the aforementioned recording medium or as a medium transmitted via a network such as the internet, etc.--

IN THE CLAIMS:

✓ ✓  
Please amend claims 1-14 as follows:

1. (Amended) An information processing device comprising:

display means for displaying information;

wireless communication means for receiving data by wireless communication from another information processing device having a display screen for displaying information; and

display control means for controlling the display means in accordance with data received from the wireless communication means to display information corresponding to a part of or the entire content of information displayed by the display screen of the other information processing device.

2. (Amended) An information processing device according to claim 1; wherein the information displayed by the display means corresponds to information relating to a

a10  
SUBB17

remaining charge of a battery of the other information processing device.

3. (Amended) An information processing device according to claim 1; wherein the information displayed by the display means corresponds to information relating to an ongoing communication state between the other information processing device and an external device.

4. (Amended) An information processing device comprising:

display means for displaying information;

wireless communication means for receiving data by wireless communication from another information processing device having a display screen for displaying information; and

display control means for controlling the display means in accordance with data received from the wireless communication means to display information corresponding to the information displayed by the display screen of the other information processing device and information which does not correspond to the information displayed by the display screen of the other information processing device.

5. (Amended) An information processing device according to claim 4; wherein the information displayed by the display screen of other information processing device

a10

comprises first level information; and wherein the information displayed by the display means comprises second level information corresponding to a sub-level of the first level information.

SUBB27

6. (Amended) An information processing device according to claim 1; further comprising mounting means for mounting the information processing device on a person's arm.

7. (Amended) An information processing device according to claim 4; further comprising mounting means for mounting the information processing device on a person's arm.

8. (Amended) An information processing method, comprising the steps of:

receiving data from an information processing device having a display screen for displaying information; and

SUBB37

displaying information corresponding to a part of or the entire content of information displayed by the display screen of the information processing device in accordance with the received data.

9. (Amended) An information processing method, comprising the steps of:

receiving data from an information processing device having a display screen for displaying information; and

a 10

displaying, in accordance with the received data, information corresponding to the information displayed by the display screen of the information processing device and information which does not correspond to the information displayed by the display screen of the information processing device.

SUBB34

10. (Amended) An information processing method according to claim 9; wherein the information displayed by the display screen of the information processing device comprises first level information; and wherein the displaying step comprises displaying second level information corresponding to a sub-level of the first level information.

11. (Amended) A computer-readable recording medium for storing a program for processing by a computer to execute the information processing method according to claim 8.

12. (Amended) A computer-readable recording medium for storing a program for processing by a computer to execute the information processing method according to claim 9.

13. (Amended) An information processing device comprising:  
a display for displaying information;

a 10

wireless communication equipment for receiving data by wireless communication from another information processing device having a display screen for displaying information; and

a display controller for controlling the display in accordance with data received from the wireless communication equipment to display information corresponding to a part of or the entire content of information displayed by the display screen of the other information processing device.

14. (Amended) An information processing device comprising:

a display for displaying information;

wireless communication equipment for receiving data by wireless communication from another information processing device having a display screen for displaying information;

and

a display controller for controlling the display in accordance with data received from the wireless communication means to display information corresponding to the information displayed by the display screen of the other information processing device and information which does not correspond to the information displayed by the display screen of the other information processing device.

Kindly add the following new claims 15-20

15. An information processing system comprising:

a first information processing device having a display for displaying information;

a second information processing device having a display for displaying information;

wireless communication means for receiving data by wireless communication from the first information processing device; and

display control means for controlling the display of the second information processing device in accordance with data received from the wireless communication means to display information corresponding to a part of or the entire content of information displayed by the display of the first information processing device.

16. An information processing system according to claim 15; wherein the information displayed by the displays of the first and second processing devices comprises characters, symbols and images.

17. An information processing system according to claim 15; wherein the information displayed by the display of the second processing device corresponds to information relating to a remaining charge of a battery of the first information processing device.

all

18. An information processing system according to claim 15; wherein the information displayed by the display of the second information processing device corresponds to information relating to an ongoing communication state between the first information processing device and an external device.

SUBB5

19. An information processing system according to claim 15; wherein the information displayed by the display of the first information processing device comprises first level information; and wherein the information displayed by the display of the second information processing device comprises second level information corresponding to a sub-level of the first level information.

20. An information processing system according to claim 15; wherein the display control means includes means for controlling the display of the second information processing device to display information which does not correspond to the information displayed by the display of the first information processing device.
